15 team parlay odds

Work out your parlay odds in our easy to use parlay calculator. Save time working out your potential payout. We have created a beautiful free parlay calculator and you have the option to add up to 15 bets. So if you like to go big, we have you covered! Try our 15 team parlay calculator now. Free Parlay Calculator Parlay Calculator - FREE Parlay picks- Biggest growing parlay community- Learn how to win more! What is a Parlay Calculator? A Parlay Calculator is a tool that works out your parlay wagers payout. It's not an easy task to work out a two team parlay never mind 15! So a parlay calculator is an essential tool for all bettors. What is a Parlay? A parlay wager consists of at least 2 selections. For example; ORL Magic @ -185 and HOU Rockets @ -105. Each selection has it's own odds but by placing both selections in to a parlay wager, the odds increase as both selections must win. If both don't win, you lose. in this example, if the 2 team parlay won (Both the rockets and magic won) a stake of \$100 would return a payout of \$300.77. You staked \$100 so your profit would be \$200.77. Had you have bet these individually it would look like this;\$100 stake @ -185 = \$154.05 Payout\$100 stake @ -105 = \$195.23 Payout So in total you would receive \$149.28 profit. Compare that to the parlay profit of \$200.77, you can see why parlay betting is so appealing. Parlay Odds The total odds of your parlay are determined by the individual odds of your bets. It does become a more straight forward moneyline parlay calculator if betting on the spread or totals however as they are fixed odds. Otherwise known as 'Pick em' markets. Find out your 12 team parlay odds or 15 team parlay odds with our free parlay calculator above. Best Parlay Betting Markets If you want to win big money, then it's good to opt for the point spread or totals as you can pick up -110 on these betting markets. Add 5 of these in a parlay and the potential payout soon stacks up! However, if you want to play a little tighter I would suggest playing the favourites on the money line. Much lower returns but it will give you a better shot of winning. Mix them up I am a big fan of mixing the bets up in my parlays as that's where the best value is. Go cross sports if you want to find the best value! Being selective is the golden rule when it comes to winning parlays so go hunting through the fixtures of each sport to find the stand out bets. I would happily throw in bets on the money line, point spread and the totals in to one parlay. There is always value to be had, you just have to find it. Our free-to-use Parlay calculator will work out the odds and return on your parlay in no time. Calculate the odds on any number of parlays, with the option to add up to 15 teams or selections.The parlay calculator is quick and simple to use. Just add in the moneyline odds into the bet line, you can add up to 15 selections in total. If you pick a favorite, you must enter the moneyline with a minus (-) (-110 for example). Press add bet to add more lines up to 15 bets. Enter your bet amount, then hit calculate. This will return 2 figures. How much you will win and what the payout will be including your original stake.The calculator can easily be used on mobile and on desktop to see potential returns of your wager in just a few clicks.As sports betting continues its expansion across the United States, there may be terms you come across regularly. Visit any online sportsbook, and you are likely to encounter phrases such as moneyline bets, parlay odds, MLB parlay, or prop bets. These are all different types of wagers that are typically found on sports betting websites and sports betting apps. Here, we are going to focus on the parlay bet and, in particular, how to use a parlay odds calculator. Understanding a parlay calc will help you to determine your parlay payout. Additionally, you can use it to decide if you should do a two-team parlay or add more teams. Betting tools such as a free parlay calc or a moneyline parlay calculator are beneficial. They can help players find out exactly how much they could win and if the bet amount is worth it.What Is A Parlay?Before we delve into the details of how to use a parlay calculator app, let's look at what a parlay bet is. This type of wager links together two or more individual bets to create a high payout. For example, a 2 team parlay payout may be 13/5, a four-team parlay might pay 6/1, a five-team parlay might pay 10/1, and on it goes. The payouts increase the more teams or totals are selected. Nowadays, online sportsbooks such as BetMGM offer daily parlay boosts; Sign up at betmgm.com to check out the latest parlay offers.For a parlay or an accumulator to win, every one of the games or legs selected must win. If any of the choices lose, the overall wager loses, regardless of the outcome of the other games. If one or more of the selections is postponed, canceled, rescheduled, or finishes in a tie, the bet reverts to the next lowest number. For example, if you place a six-team parlay and have five winners and a tie, your bet pays out as a five-team parlay. If you submit a two-team parlay and one team wins and the other is a tie, this is now a straight bet.The resulting bet will carry the same risk amount as the win will be calculated to reflect the odds of the remaining team.How Do I Calculate A Parlay Payout?Typically sportsbooks calculate parlay payouts for you, or you can use our sports parlay calculator above. The math of this works the same whether you are using a Las Vegas Parlay calculator or a straightforward accumulator bets calculator. So let's look at the numbers of how to calculate a parlay.First, you need to convert the American odds to decimal odds using an odds converter. Next, multiply the decimal odds together to get your multiplier. Then you need to multiply the multiplier by your bet amount and subtract your initial stake to get the parlay odds.The most straightforward way of doing this is to pick a calculator using American odds. For example, you could enter American odds such as +140 into the calculator, and this will automatically convert to 2.4Using the above +140 as a gambling calculator odds example, the formula works like this:(140/100) +1 = 1.41.4 +1 = 2.4Players can convert the odds for each game of the parlay into a decimal format, like in the example above. If we look at a more complicated model and decide you want to bet on some big favorites on the moneyline as you are feeling confident they will win but aren't convinced they will cover the spread.You decide to bet on the Seahawks -300 against the Jaguars, the Ravens -200 vs. the Lions, and the Rams -150 at the 49ers. The formula looks like the below in decimal odds:1.333 x 1.5 x 1.667 = 3.33The above parlay on the Seahawks, Ravens, and Rams to all win pays +233. Football parlay odds can offer some fantastic payouts, especially as some sportsbooks offer odds boosts.How To Use The Parlay CalculatorOur betting calculator above can be used for all types of parlay wagers. It is easy to use and converts fractions or decimals into American betting odds instantly. To use the above parlay bet calculator, select parlay bets and enter your preferred odds format. Then enter the amount of money you want to bet in the bet amount.You are able to enter as many bets as you like; you just need to click the plus symbol when entering betting odds to generate another field. Let's say you wanted to utilize the calculator to check the payout on a \$50, four-team NFL parlay with both moneyline and spread wagers. The individual odds are listed below:-New England Patriots -10, (-110)New York Jets Moneyline (+140)Buffalo Bills -9 (-108)Minnesota Vikings moneyline (+295)When using the parlay calculator, you can ignore the point spread. In this example of an NFL parlay, you would fill out four spots with odds of -110, +140, -108, and +295. The results will instantly reveal that this would pay out \$1,692.78 on a successful \$50 wager.Should You Make A Parlay Bet Or Not?As we have mentioned throughout this article, parlays can be highly lucrative. Additionally, parlays allow bettors to get involved in numerous contests without having to bet every game or match individually. There is also a customizable element of a parlay bet, as you could bet \$100 on a two-team parlay or \$20 on a six-team parlay. You can land huge payouts from small wagers. However, this must be countered with the fact that parlays are very hard to win, hence the potential large payouts.In terms of pure entertainment, parlays are an excellent choice. Joining your friends and plotting a long-shot parlay keeps you invested and adds excitement to a typical NFL Sunday where a single bet may not. It is also important to know that you can back out of a parlay before the wager is settled.If the first four legs of a five-team parlay are successful, you could bet the other way on the fifth leg to win money no matter the outcome.Best Parlay Betting MarketsUltimately the best sports markets for a parlay bet will come down to personal preference. All major online sportsbooks offer a wide range of odds and specials on the NFL, NBA, MLB, and NHL. Parlays work particularly well in the NFL as you can place your bet on a Sunday morning and wait for the full slate of games to take place. This will keep you interested in all of the games.Parlays are available on all significant domestic sport, so it is a case of wagering on the market you feel most comfortable with. After all, we always bet to win, so it makes sense to give ourselves more of a chance.FAQsHow much does a 15 team parlay pay?A 15 team parlay could potentially pay +16,000. However, every leg will need to win for it to be a success, which is unlikely. Whether you're new to the world of online gambling or an experienced player that's seen it all, a parlay odds calculator will likely be a useful tool. Before jumping into the mathematics of how to calculate a parlay, we'll first explain exactly what a parlay bet actually is. Essentially, a parlay bet is a bet where multiple outcomes are combined to create one bet, with all the odds of your selected bets being tied together. If you're familiar with accumulator bets, then parlays will be easy to understand as they're the same thing.Using a calculator to work out the return on your parlay bet is a great way to see what you can win before committing to laying down the bet. On our parlay calculator below, you can select up to 15 teams or bets quickly, and see the potential win amount should your wager come in. You can also use any free bet offers from sportsbooks when selecting your parlay.Parlay bets are beneficial to bettors as they often save money and can be far more profitable than standard single bets, albeit with a greater risk of losing. To win a parlay bet, each of your selections must come good. Even if you've chosen 15 bets and 14 of those end up winning, that single loss will prevent you from securing the win. With this information in mind, it's usually not worth creating a parlay bet jam-packed with favorites. Doing so will require that you wager more money and add more selections to win the big bucks, which actually decreases your chances of being rewarded a profitable return.You may be wondering how you can calculate a parlay or an accumulator yourself. To do so, we recommend using a parlay calculator app or a website that offers a free parlay calc. There are some simple formulas to keep in mind when putting your parlay together, and we'll go through them now. Understanding The Parlay Bet - How to Calculate Your ProfitThere's no need to be an expert at math to understand the ins and outs of a moneyline parlay calculator. The first thing to understand is single moneyline bets. A moneyline bet is where the bettor chooses a specific outcome, like a win. By putting multiple moneyline bets together, you get the parlay bet.Say, for instance, you plan to bet on a soccer game involving Liverpool and Leeds United. Your favorite sportsbook offers similar odds on both sides, so it makes sense to bet on a Liverpool victory as they're the better team. In this case, the online casino has Liverpool to win the game at -4,000 and Leeds at +3,800.As you can see, odds are made up of a plus sign, minus sign, and numbers. These are the three most important elements to moneyline betting. The minus represents the favorite, while the plus symbol tells you which team is the underdog. By looking at the number, it's possible to calculate your profit for each bet.Finding your profit when betting on the underdog is relatively easy, considering the number beside the number beside the plus symbol tells you exactly how much you'd win if you were to wager \$100 on that outcome. In the Liverpool vs Leeds encounter, a \$100 bet on Leeds United would result in a \$3,800 win for the bettor. The formula is: Wager divided by 100, multiplied by the moneyline = total profit. We found the profit from betting on a Leeds victory by dividing our wager of \$100 by 100, then multiplying that number (1) by 3,800.To calculate your profit when betting on the favorite, you'll use a similar formula: 100 divided by the moneyline, multiplied by the wager. Using our example of Liverpool vs Leeds United, we would divide 100 by 4,000, then multiply the result of that (0.025) by our wager (\$4,000). This equals \$4,000. Therefore, we now know that it would require a \$4,000 bet to earn \$100 profit. Of course, all this can be done without straining your brain by using the gambling calculator above.Pick A Calculator That Does It For YouYou don't need to get a pen and paper out every time you want to calculate the odds of your football parlay odds, although some people prefer to do it that way rather than using an accumulator bets calculator. To find the odds of a parlay bet, simply convert your odds to decimal form and multiply them one by one. For example, imagine you've chosen five selections at odds of -350, -200, -225, -450, and -500. In order, these convert to 1.29, 1.5, 1.44, 1.22, and 1.2. By multiplying each of these together, we get odds of 4.07. For one dollar that you bet on these odds, a win would return \$4.07. So, if you placed a bet of \$10 with these odds, you'd win \$40.70 in profit. In US odds, 4.07 reads as +307, so your bet would be a favorite.There are two neat methods you can use to find out what the decimal to moneyline conversion is. The first is for decimal odds less than 2.0, and the other for decimal odds worth more than 2.0. To find your moneyline odds from decimal odds less than 2.0, divide the difference between the decimal odd and 1 by -100. Afterward, round up to the nearest whole number. To discover your moneyline odds from decimal odds greater than 2.0, take the difference between the decimal odd and 1, then multiply it by 100.You don't need to choose a fancy Las Vegas parlay calculator, most sportsbooks will provide a parlay calculator when you add your wagers to the betslip. You can, of course, use our free online moneyline parlay calculator above and it will do the exact same job, for free. Even if you're just looking for a 2 team parlay payout and high-risk bets don't particularly interest you, a parlay calculator odds feature can make things significantly easier.
